

Anjia Property

The full catalogue, the same brand and a warmer luxury experience - presented so a buyer abroad can act with confidence.

The homepage today (left) and the proposal (right) on an iPhone 14. The screenshots are unretouched layout evidence from the refreshed build, which contains the verified 167-record source set.

	Prepared for
Company	Anjia Property Management Co., Ltd.
Site	www.anjia-home.net
Prepared	5 September 2026
Source set	167 total: 43 developments, 123 resale residences and 1 land parcel
Content proof	4 articles, 11 verified testimonials and 8 advisers
Crawl proof	3,604 image references inventoried; 3,586 remote assets retained

Where things stand

Your desktop site is competent. The problem is that property buyers browse on phones, and on a phone the site does not fit the screen.

We measured the live site on ten devices, from a 320-pixel Android up to a 1920-pixel desktop. Below 480 pixels the page is wider than the screen and slides sideways under the thumb. Prices and descriptions are cut off mid-sentence.

- **On the most common Android screen, 119 pixels of every section sit off-screen.** A third of a property card is hidden unless the visitor discovers horizontal dragging.
- **There is no replacement menu on a phone.** Core routes and the consultation action disappear below the desktop header breakpoint.
- **Floating service buttons sit over commercial content.** They obscure prices, descriptions and testimonials at small sizes.
- **Listings are not present in the initial HTML.** Search engines cannot reliably index the catalogue, so paid traffic carries too much of the load.

None of this is anyone's fault. The site runs on a third-party platform, and these are platform decisions that cannot be repaired from inside the current template.

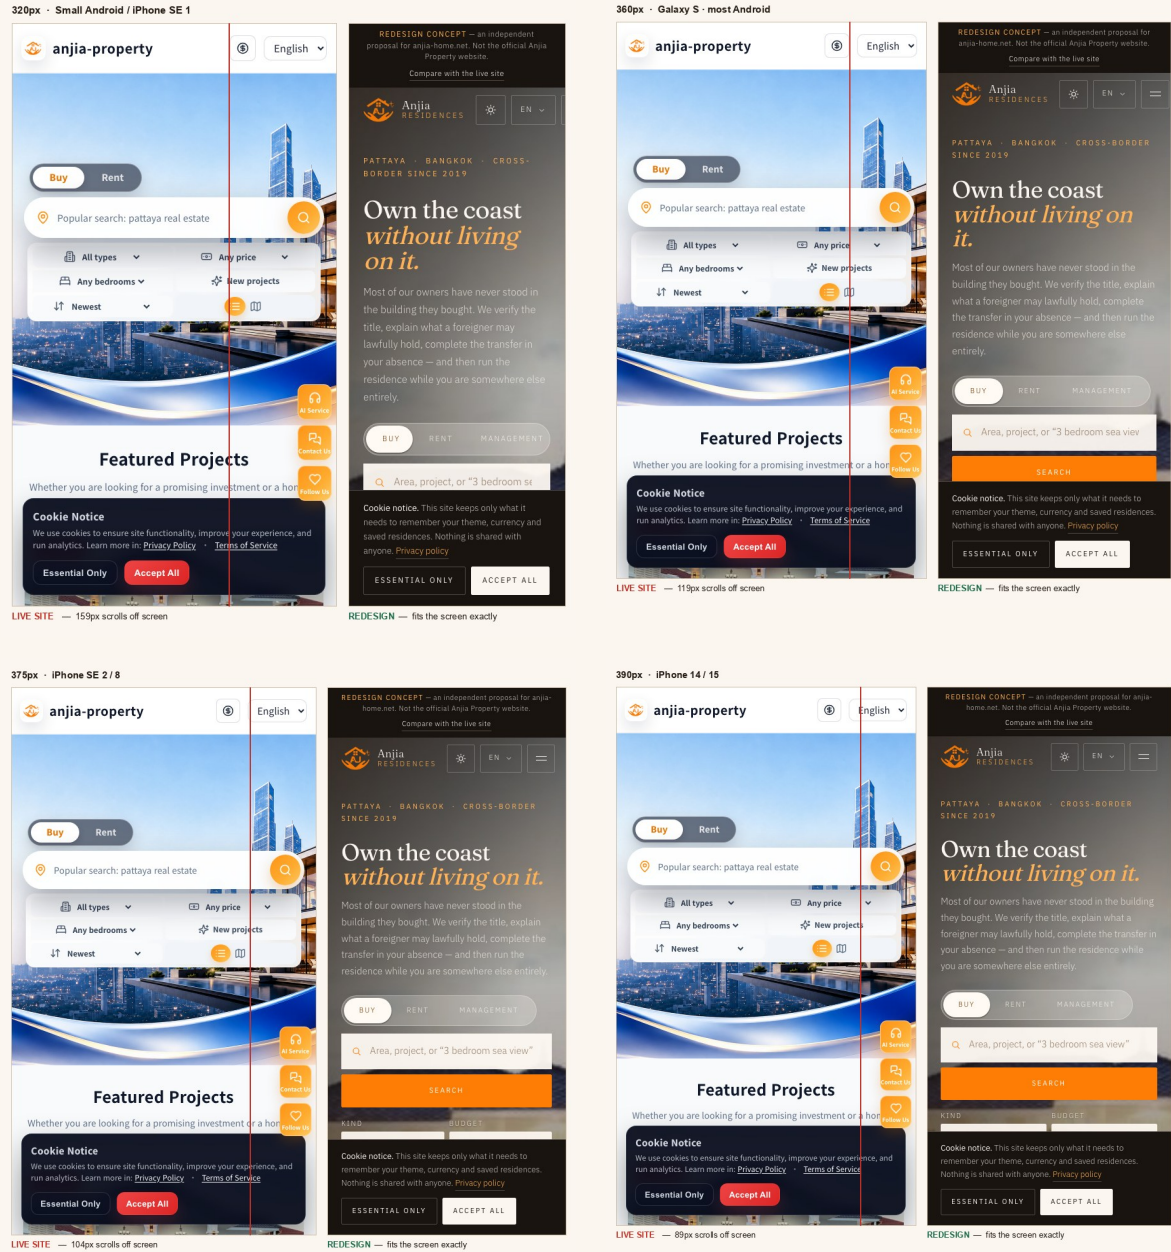

What that costs, in plain terms

What happens	What it means for the business
A third of the page is off-screen on a phone	The buyer sees half a price and judges the firm from an incomplete page
No menu or persistent call to action on mobile	Advertising spend lands on a page with no reliable next step
1.1 MB of code before the first picture	A slower first impression on a Thai mobile connection
Nothing useful in initial HTML	The business rents traffic instead of compounding organic discovery
The bare domain shows a certificate warning	The first impression can be a browser security warning
A competitor uses the same platform treatment	Anjia looks interchangeable when its service is not

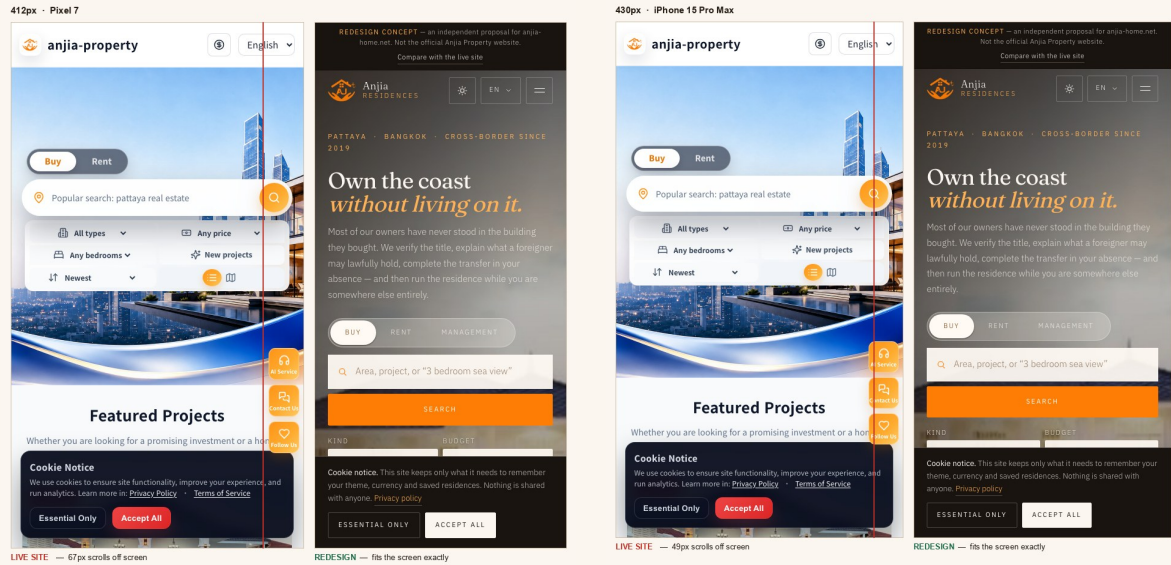

Before and after, on every screen

Both sites were captured in the same browser at the same emulated device size. In each pair the live site is on the left and the proposal is on the right; the red line marks the phone edge.

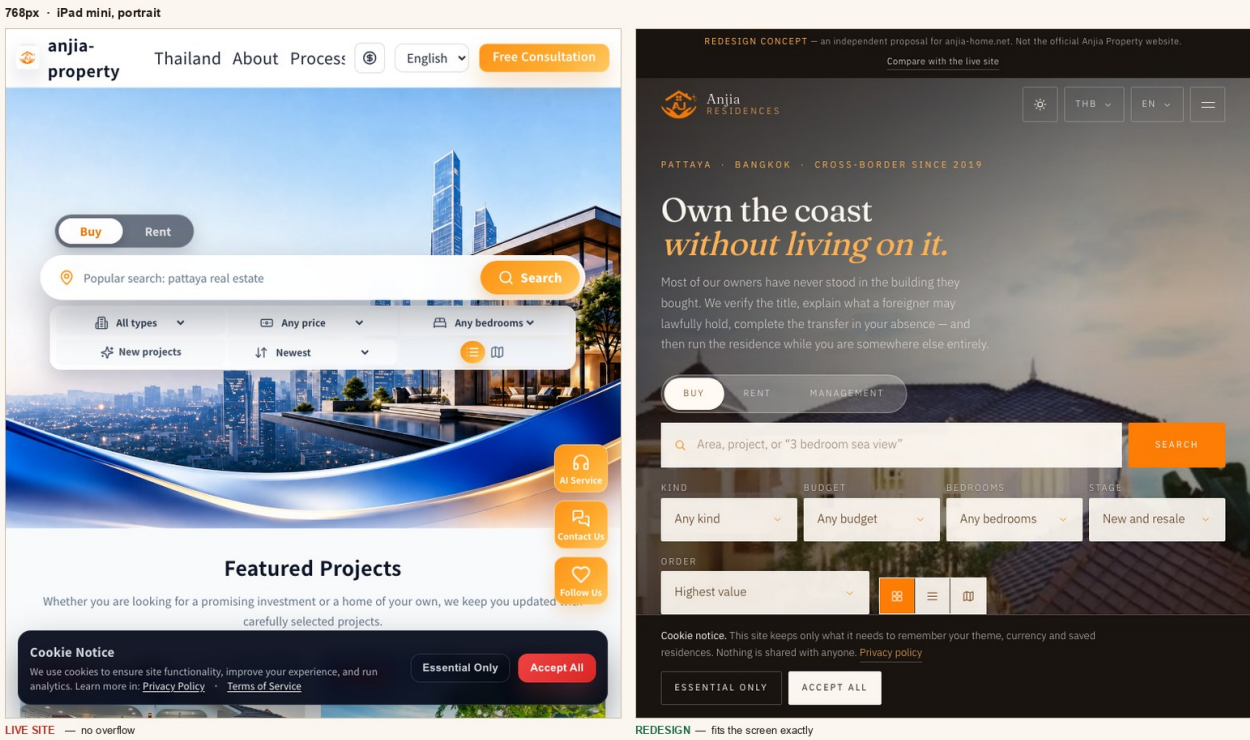

Phones

Larger phones

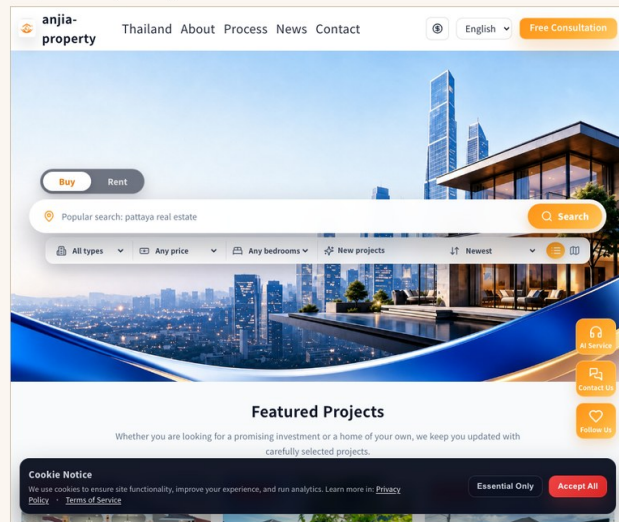

Tablets

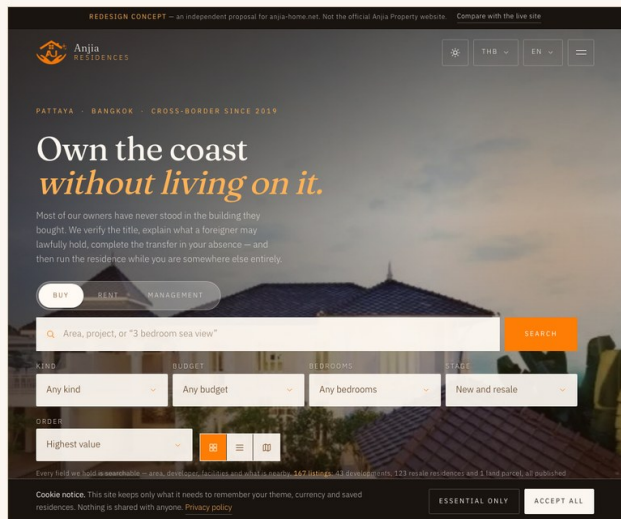

iPad mini, portrait.

1024px · iPad Pro, landscape

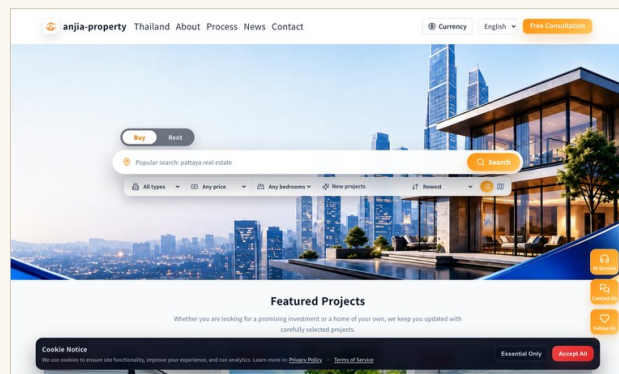

LIVE SITE — no overflow

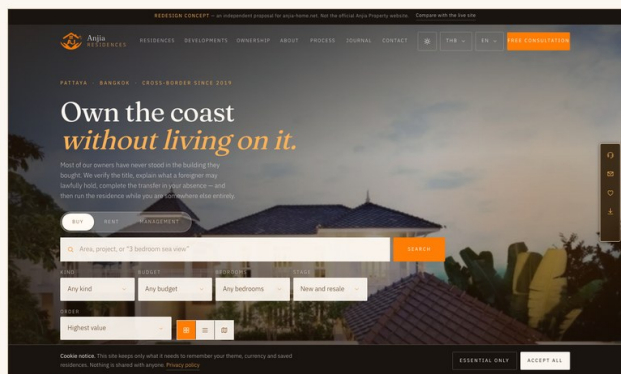

REDESIGN — fits the screen exactly

iPad Pro, landscape. The refreshed proposal deliberately keeps compact navigation here, preventing the header collision reported around 1,038 px.

1440px · Desktop

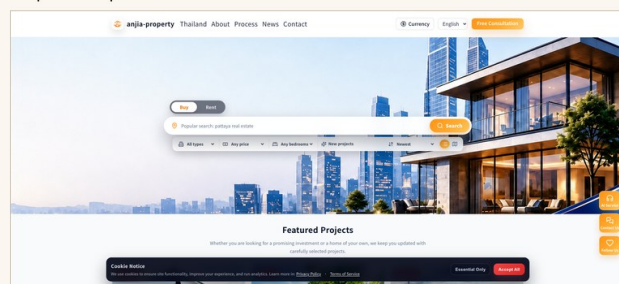

LIVE SITE — no overflow

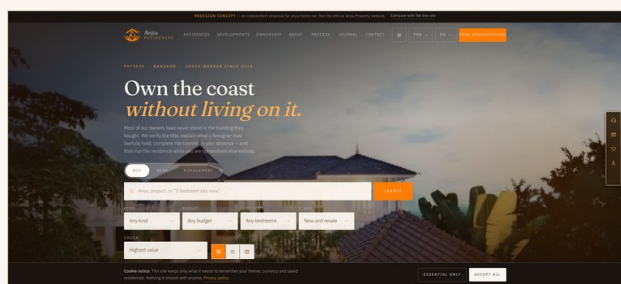

REDESIGN — fits the screen exactly

Desktop, 1440 pixels. The proposal keeps the same editorial system while the refreshed catalogue expands to all 167 verified records.

1920px · Desktop HD

LIVE SITE — no overflow

REDESIGN — fits the screen exactly

Desktop HD, 1920 pixels.

The refreshed scope, counted

These are source-crawl counts from 5 September 2026, not estimates taken from the cards visible in the screenshots. The layout evidence stays the same; the refreshed build repopulates it from the complete source set.

Source evidence	Verified	Refreshed proposal	Why it matters
Total catalogue	167	full source set	No pagination sample presented as the whole inventory
Developments	43	all records	Project profiles and unit context stay discoverable
Resale residences	123	all records	The resale catalogue is no longer reduced to 24 items
Land	1	all records	Ownership guidance stays explicit for this asset class
Articles	4	all published items	No live editorial item is silently omitted
Verified testimonials	11	all verified items	Trust is preserved without inventing endorsements
Advisers	8	all profiles	Named people add warmth and accountability
Image references	3,604	3,586 retained	3,014 are at least 1,000 px wide
Pitch language	English	English only	No selector pretends English copy is localized

What full-catalogue parity means

- One real, indexable page per source record, with a unique title, useful description and complete gallery.
- Filters and result counts derive from the same data object, so numbers shown to buyers cannot drift from the available inventory.
- All 105 published unit types retain their layout drawings; every usable project, resale and land gallery image is attached to its record.
- Full-detail responses supply prose and media; list-preview snippets are not allowed to end mid-word on a property page.

What we kept, and what we warmed

The brief is to raise the site to a luxury register without losing Anjia. The palette and recognisable brand remain; the experience becomes more human, useful and complete.

Kept

- **Your orange.** #fe7d05 remains the primary brand accent.
- **Your slate.** #0f172a still anchors primary buttons and functional chrome.
- **Your source content.** 167 property records, 4 articles, 11 verified testimonials and 8 adviser profiles are carried forward without invented claims.
- **Your photography.** 3,604 references were inventoried and 3,586 remote assets were retained locally.
- **An honest language scope.** This pitch and current proposal are English. Thai, Chinese and Japanese require commissioned translations before a language selector can truthfully offer them.

Warmed

- **Cream becomes the primary reading surface.** Dark espresso remains for hero moments and navigation, while warm paper sections keep the experience luxurious without feeling austere.
- **People return to the story.** Adviser portraits, named stewardship and verified client voices create trust that text-only cards cannot.
- **Property cards get room to breathe.** Fewer, larger cards per row and more legible metadata let photography carry the luxury signal.
- **Each niche earns a distinct composition.** Developments, resale, land, journal and stewardship share one system but use content-specific layouts. Spring reveals, tactile controls and cross-page transitions make the system feel alive, with a complete reduced-motion fallback.

REDESIGN CONCEPT — an independent proposal for anjia-home.net. Not the official Anjia Property website.

ACCEPT ALL

The warm collection treatment. The data refresh expands this composition to the complete 167-record source catalogue.

7

Privacy-safe by construction

The source interface exposes operational fields that should never become public website content. The crawler uses an explicit allow-list for listing facts and media, excludes owner names, personal phone numbers, LINE IDs and internal sales contacts, and writes only the sanitized public model used by the proposal.

The 3,604 figure is the number of image references inventoried across browser and API responses. After excluding local harness URLs, the archive manifest contains 3,586 retained remote assets; 3,014 are at least 1,000 pixels wide.

What still blocks a production launch

Gate	Current proposal state	Required before official launch
Lead delivery	Enquiry forms are demonstration UI	Connect an approved endpoint; add validation, consent, spam control and tested success/failure handling
Indexing	Proposal pages remain noindex and robots-blocked	Move to the approved domain, add canonical URLs and a sitemap, then remove blocking only after content sign-off
Legal	Proposal copy is not legal approval	Approve company details, property disclaimers, privacy notice, terms and cookie/analytics consent with Anjia counsel
Localization	English presentation only	Commission and review native Thai, Chinese and Japanese content before enabling those language choices
Operations	Static proposal hosting	Confirm domain certificate, contact/social destinations, monitoring, analytics and an inventory refresh owner

One immediate fix on the current site

The mobile sideways-scroll issue can be released independently by allowing the News panel and its children to shrink:

```
.insights__panel, .insights__articles, .insightArticle,
.insightArticle__heading, .insightArticle article { min-width: 0 }
```

A sensible order to finish the work

The refreshed proposal can become an official site only after content parity, conversion plumbing and legal ownership are signed off.

Gate	What happens	Owner	What it proves
1. Data lock	Reconcile 167 records, 4 articles, 11 testimonials and 8 adviser profiles; run privacy and truncation checks	Content + engineering	The public catalogue matches the verified source set
2. Warmth pass	Apply cream-led surfaces, larger type, adviser photography, human captions and niche-specific collection layouts	Design + Anjia	Luxury feels personal rather than cold
3. Conversion	Connect every enquiry route to the approved lead endpoint and test validation, consent, delivery and failure recovery	Engineering + sales	A buyer can reach a real adviser reliably
4. Legal and search	Approve legal copy and tracking consent; establish the official domain, canonical URLs and sitemap; remove noindex at sign-off	Anjia + counsel	The site can be promoted and indexed responsibly
5. Release QA	Test real phones, keyboard and screen readers; verify links, prices, images, map/list state, performance and monitoring	QA + engineering	The launch is usable, measurable and supportable

What we recommend

- Treat the verified full catalogue and working enquiry endpoint as release criteria, not post-launch enhancements.
- Keep the orange and editorial luxury system, but make warmth measurable: human photography, larger body type and cream reading surfaces.
- Keep the pitch English until native translations are commissioned, reviewed and complete across navigation, forms, legal copy and metadata.
- Keep the privacy allow-list in the crawl pipeline and review it whenever the upstream API schema changes.

The screenshots are unretouched comparisons captured from the existing live site and refreshed proposal at matching viewports. Catalogue totals were verified independently by the crawl and build assertions.

Inventory verified 5 September 2026: 167 property records (43 developments, 123 resale and 1 land), 4 articles, 11 verified testimonials and 8 advisers. The proposal remains English-only, noindex and non-transactional until the production gates above are completed.
